Operation

- ⇒ Submersed motor with top intake draws water into the fountain housing and pushes the water past the deflector nozzle and into the air.
- ⇒ Individual water droplets absorb oxygen from the atmosphere and return to the body of water transferring oxygen from the air and into the water.
- ⇒ Moving water mixes and agitates the water, spreading oxygenated water throughout the body of water.
- ⇒ Single propeller and deflector nozzle design allows for greater water flow with a lower likelihood of clogging.
- ⇒ UV resistant thermoplastic fountain housing screen shall catch large debris and assist in reducing the likelihood of clogging.

During unit operation, water is circulated from 360° around the unit as well as from below. Top intake for shallow water operation.

Assembly and Installation of Kasco equipment is quick and easy. Each unit includes an Owners Manual with specific steps to assemble, install, and operate the equipment properly.

1400JF Without Lights

1400JFL With Lights

The motor unit attaches to the float using stainless steel hardware for a secure assembly. The single section, U.V. resistant, high density thermoplastic float allows for excellent durability with an attractive shape and low visibility. The rigid polypropylene fountain housing helps protect the unit from debris and reduce the likelihood of clogging.

Each unit includes a UL Approved Control Panel complete with Class A Human Rated GFCI Protection, 24 Hour Mechanical Timer, and Photo Eye for Optional Light Kit. NEMA Type 3R weatherproof enclosure.

The Optional Lighting Package easily mounts to the float and can be purchased and added at any time. ETL approved.
